

TOP 10 FOR SUCCESS with Sunoptics®

10 **Dedication to daylighting education**

Since 1978, Sunoptics has been educating our clients on how to use the free light from the sun to save energy, increase productivity, better classroom performance, boost morale and reduce expenses.

9 **Toplighting is the best way to bring in daylight**

Installing skylights on the roof is the best way to daylight a space. Think of Sunoptics skylights as wireless luminaires.

8 **Made in the U.S.A.**

Sunoptics fabricates and assembles by hand high-performance daylighting products and accessories in our Sacramento, CA and Conyers, GA (coming soon) facilities.

7 **Unique prismatic skylights eliminate glare**

Sunoptics utilizes prismatic acrylic and polycarbonate material to create our unique skylights. The prismatic pattern provides 100% diffused, glare-free, healthy, 100 CRI natural light which eliminates the typical glare and hot spots associated with skylights.

6 **No leak or condensation concerns**

Sunoptics patented high-performance design has been proven to eliminate leak and condensation concerns, just ask Wal-Mart, Home Depot, Kroger or Best Buy.

5 **Reduce energy consumption**

Properly diffused natural light has one-third the heat per lumen of electric light, so by combining toplighting and lighting controls to turn the lights off you can reduce energy consumption and heat in the building.

4 **Maximize energy savings**

Sunoptics prismatic skylights maximize the amount of hours electric lights can be shut off, which can be quantified for customers using SkyCalc analysis software. SkyCalc is a third-party validated energy modeling program for daylighting.

3 **Meet daylighting mandates with Acuity's competitive advantage**

New versions of the ASHRAE and IECC building codes have adopted mandates for daylighting which require skylights and lighting controls, giving Acuity a competitive advantage as the only lighting company able to offer the complete daylighting solution from a single source.

2 **Design assistance & ROI analysis**

Sunoptics offers many value added services including design assistance, building code compliance, SkyCalc analysis and LEED documentation.

1 **There's no greater efficiency than off!®**

Toplighting + Lighting Controls + Electric Lighting = Energy Savings

NATURALLY SMART. REMARKABLY SIMPLE.

Daylight is free to use and Sunoptics high-performance prismatic toplighting solutions are the best way to light a space for occupant productivity and building energy savings
